

HYDRA

HIGH PRESSURE AQUEOUS GLOVE BOX

HYDRA GLOVE BOX STYLE WASHERS

were originally built for auto rebuilders, gear box rebuilders, and maintenance personnel who required quick removal of grease, oil, carbon and gaskets to evaluate the parts for repair.

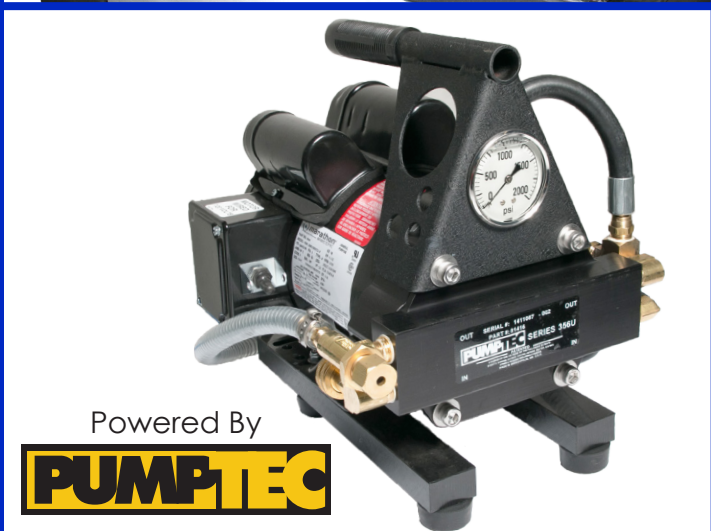

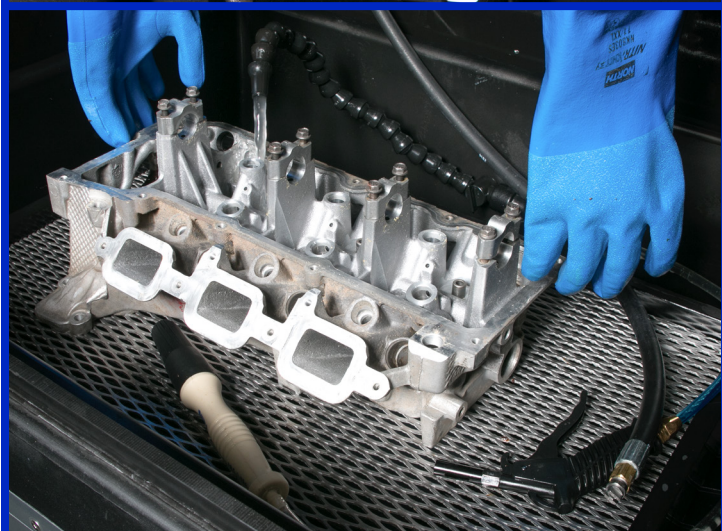

The flexibility of these washers has made them very popular in a variety of applications ranging from casting and machining to heavy equipment, engine rebuilding and automotive repair. Our customers are telling us that it gives them the ability to replace hazardous solvents without sacrificing quality of cleaning or productivity. The chemicals that we have for these washers are compatible with aluminum, steel, brass, cast iron and more.

The Hydra series of washers is also available with a rotary table, a basket with rotary manifold, and a soak station with a brush pump.

FEATURES

- Rugged molded and thermally welded plastic construction
- Available pressure ranges from 500-1000 PSI
- 50 gallon sump capacity for extending service cycles
- Easy access, easy clean sump
- Digital temperature control
- Low liquid level protection
- 2 or 3 stage solution filtration no tools required to service
- Flow through parts cleaning brush for small or delicate parts
- Compressed air blow off
- LED low voltage work light
- Heavy duty casters for ease of movement
- The door opens with a foot switch so that an operator with parts in his hands doesn't need to put them down to open it.

HYDRA HIGH PRESSURE AQUEOUS GLOVE BOX

SPECIFICATIONS

- Polyethylene plastic construction
- Sump Capacity: **50 gallons**
- Electrical Requirements: **120 volt / 15 amps / 60 Hz.** Equipped with a ground fault plug
- Electric Heat: **1 kw**
- Work Area Dimensions: **34" left to right**
- Work Area Dimensions: **26" front to back**
- Overall Dimensions: **39" left to right**
- Overall Dimensions: **35" front to back**
- Work Table Weight Capacity: **250 lbs.**
