# RX-20/CMX-20

The base, exhaust manifolds, handle, gearbox housing and cleaning heads are all cast or molded aluminum. Other parts are either metal or high impact plastic.

## Construction

well as the vacuum power depends entirely on the type of cleaning system you use.

**NOTE:** The operating temperature and pressure of the cleaning solution as

The RX-20's electric motor drives its precision transmission which, in turn, rotates the star assembly. Cleaning solution is injected through the center of the gearbox shaft directly to the five spray jets. Soiled solution is then extracted from the carpet by five cleaning heads and drawn through the aluminum exhaust manifold to your cleaning system's recovery tank.

The RX-20's carpet cleaning system is very similar to the unit easily with less fatigue and without back strain. the technician to maneuver the unit easily with less fatigue and rotary motion enables motion to do the cleaning. The RX-20's weight distribution and rotary motion enable carpet cleaning. In the past, a wand technician had to supply all the pressure and

Your new RX-20 has been precision engineered to bring you to the state-of-the-art in carpet cleaning.

## An Evolution That Had To Happen

Once again, congratulations to another cleaning professional who will not wait for tomorrow, and will not have to compete against the RX-20. The competition will have to try and compete with you!

Using the RX-20 in your business will turn you into a professional carpet cleaning operator, rather than a professional laborer.

The RX-20 is REVOLUTIONARY. Your foresight in purchasing this ultimate "cleaning machine" will be rewarded with the knowledge that you care enough to give your customer the maximum cleaning process available.

You and your business, while decreasing the fatigue factor that may have prevented you from going after some of the large cleaning jobs that are available to carpet cleaners and maintenance professionals today. With competition as strong as it is in most communities, you have invested in not only a cleaning tool, but a marketing tool that will enhance your professional image in every way.

## Congratulations,

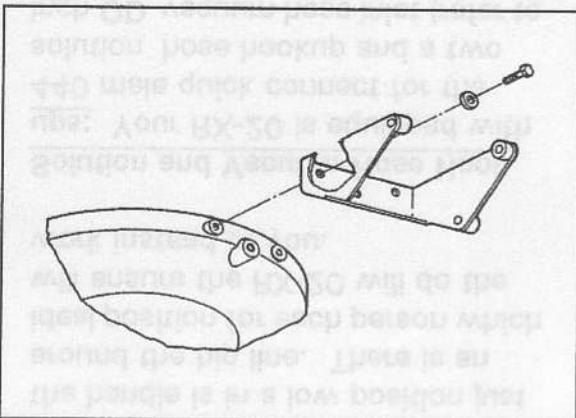

specifications and features of the CMX-20 WDR and RX-20. This document also includes a brief description of the CMX-20 WDR and RX-20.

The RX-20 and CMX-20 are designed to meet today's needs for a compact, reliable, and efficient water delivery system. The RX-20 and CMX-20 are designed to provide a reliable and efficient water delivery system for a variety of applications.

## Machine Specifications

- a) With the three bolts provided, attach the handle to the base using a  $\frac{9}{16}$ " wrench.
- b) Now assemble the stainless steel hose to the rotary union using  $\frac{7}{16}$ " and  $\frac{1}{2}$ " wrenches.

- c) Next attach the 2" vacuum hose to the base and handle using the hose clamps provided.
- d) Next plug the male and female electrical connections together.

- To assemble:
- a) With the three bolts provided, attach the handle to the base using a  $\frac{9}{16}$ " wrench. (see illustration to below).

If you purchased a High Speed RX-20, it may require assembling if it was shipped in two separate boxes.

## Assembly Instructions

## *Operation*

RX-20/CMX-20

Speed RX-20): The 50 foot electrical cord on your RX-20 is a permanently attached, three-prong grounded line requiring a three-prong, 15 amp receptacle.

Do not, under any circumstances, remove the ground prong from your RX-20 power cord. Serious injury or death may result. To connect the power cord to the unit, insert the male twist-lock plug (from the unit) into the female end (on the power cord) and twist until they are securely locked together.

◆ CAUTION ◆

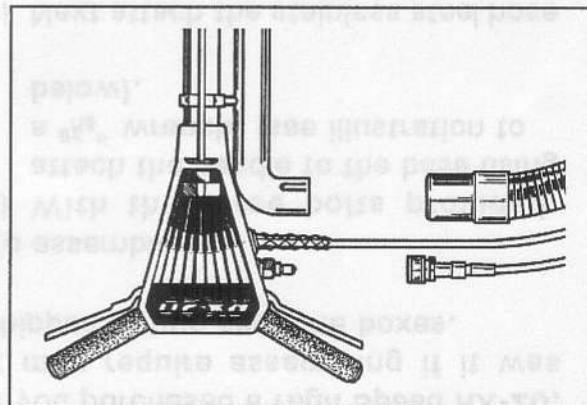

**RX-20):** The 50 foot electrical cord on your RX-20 is a detachable three-prong ground lead requiring a three-prong 15 amp receptacle. A three-prong to two-prong adapter may be used, providing its ground wire is properly attached to a grounded terminal.

**IMPORTANT:** The vacuum hose must be in good condition to ensure maxi-mum airflow. If you do not have a 440 female quick connect and can not find it locally, it can be ordered from the Hydramaster Parts Department. Call (206) 775-7276 and request part # 052-051 (440 QC).

- 1. Handle Adjustment:** Loosen the adjustment knob located below the RX-20 label (turn counter-clockwise to loosen, clockwise to tighten). Adjust the handle to a comfortable height. Several adjustments may be needed before a desirable operating position is found.

**NOTE:** Most technicians have found better control and less fatigue when the handle is in a low position just around the hip line. There is an ideal position for each person which will ensure the RX-20 will do the work instead of you.

**2. Solution and Vacuum Hose Hookups:** Your RX-20 is equipped with a two inch OD vacuum hose inlet (refer to the above illustration). A solution hose with a 440 female quick connect is required. The vacuum hose for proper air flow with a truck mounted system.

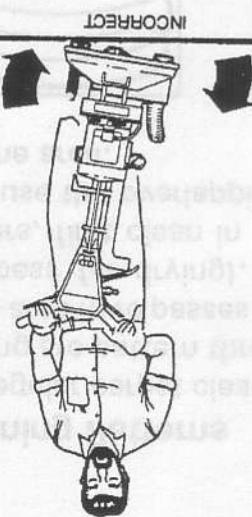

## Preparation

Do not tilt machine sideways while moving forward and backward. A loss of control may result in damage to the unit or location.

Once you have become familiar with the speed and movement of the machine, practice making it hover in one spot. The hovering maneuver is useful for removing stubborn stains, as well as removing furniture indentations.

◆ CAUTION ◆

In a three to five foot arc, as shown in Cleaning Patterns on the following page.

To move forward and backward,

position the handle so that the unit remains a stationary, then push forward or pull back. To feel millarize yourself with your RX-20, practice on an open area. Depress both the solution trigger and motor trigger slowly the RX-20 moves.

#### **Operating Instructions**

Do not, under any circumstances, remove the ground prong from your RX-20 power cord. Serious injury or death may result.

◆ CAUTION ◆

A three-prong to two-prong adapter may be used providing its ground wire is properly attached to a grounded terminal.

The right, lift the handle slightly. The more you lift or lower the handle, the faster the RX-20 will move.

2. **Maneuvering Your RX-20:** Your RX-20 maneuvers like a rotary floor machine. To move the RX-20 to

side of the handle under the rubber hand grips. As you operate the RX-20, the trigger on your right-hand side controls the electric motor that drives the cleaning heads. On the left hand side, the trigger controls the high pressure solution spray. The air flows constantly while the RX-20 is in operation.

here are

DO NOT, UNDER ANY CIRCUMSTANCES,  
remove the ground prong from your  
RX-20 power cord. Serious injury or  
death may result.

◆ CAUTION ◆

A three-prong to two-prong adapter may be used providing its ground wire is properly attached to a grounded terminal.

Special Information

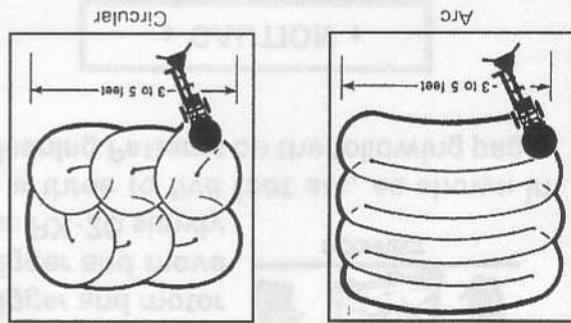

2. DO NOT operate your RX-20 on hardwood floors.
  3. DO NOT operate your RX-20 over loose or unraveled carpet seams. The cleaning head may catch and cause further damage.
  4. DO NOT operate your RX-20 on concrete floors. It will develop sharp edges on the extraction heads that will damage carpet fibers.
  5. DO NOT clean over the edge of a loose carpet. Instead, clean only up to the edge. Damage may occur should the extraction heads catch the loose carpet.

# Cleaning Information

RX-20/CMX-20

## Cleaning Patterns

**Cleaning Patterns** For regular carpet cleaning use an overlapping arc pattern three times over the same area (two passes with solution and one pass for drying). When cleaning carpers, first clean in circular pattern, then use the overlapping arc pattern to dry the area.

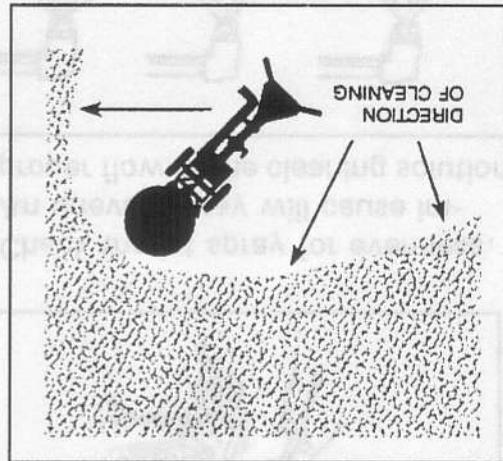

During the cleaning of some plush car-  
pets you may notice a "pilling" effect.  
With an RX-20, loose yarns form balls  
and are kicked aside as the cleaning  
heads revolve. This is normal when ag-  
gressive cleaning or even normal vacu-  
uming takes place, as evidenced by a  
number of dead, loose yarns in the  
vacuum cleaner bag. These loose yarns,  
in most cases, are short staple yarns or  
filler yarns used to give the carpet a  
denser appearance. Because your RX-  
20 weighs approximately 90 pounds and  
rests on five four-inch cleaning heads,  
the arms are not sucked up into the  
vacuum heads as they are with a  
vacuum cleaner or old-style cleaning  
wand.

**Note:** Dirtest areas may require two or more cleaning passes. Using either pattern, you should develop a comfortable rhythm. To obtain maximum performance from your RX-20, move it slowly and deliberately with a 50% overlap; giving it time to clean and extract. (Unlike a manual wand, the RX-20 is doing the work you had to do in the past.) A steady pace rather than a frenzied one will increase efficiency and production and decrease fatigue.

## The Following Cautions Should Be Observed While Cleaning:

The RX-20 has been very successful in restoring badly matted traffic lanes in front of doorways and sofas. Even pivot areas can be brought back to life again, in most cases. "Cornrowing" in hallways can also be eliminated with mini-

B. The RX-20 is a very aggressive carpet cleaning power head and will leave the carpet with a freshly-cleaned appearance. The carpet should be brushed or groomed after the cleaning process to remove any swirl marks left behind.

**Cleaning Hints**

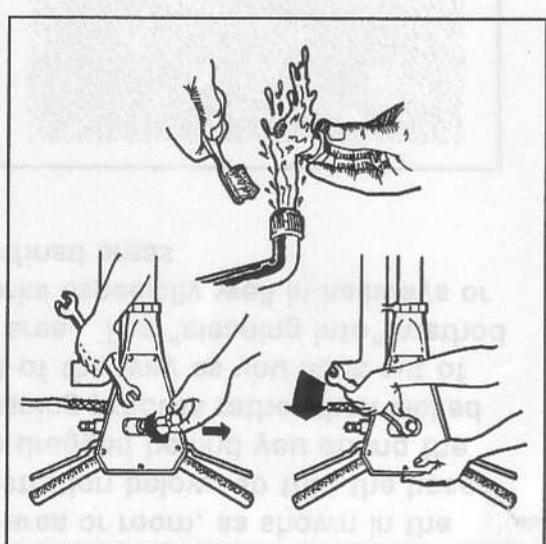

A. Most cleaners customarily clean their way out of an area or room. With the RX-20, it is possible to clean into an area or room, as shown in the illustration below, so that the hoses are dragged behind you during the cleaning process rather than kicked out of the way as you back out of an area. The "cleaning into" method works especially well in hallways or confined areas.

Cleaning Hints

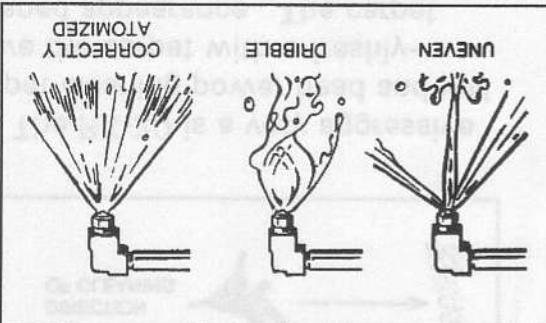

On older, rubberbacked, glued down car-  
pets that may be delaminating with age,  
the RX-20 may cause further delamina-  
tion. When in doubt, DO NOT use Your  
RX20.

◆ CAUTION ◆

- Good care and regular maintenance of your RX-20 will result in a long, dependable life for the unit. Keep in mind that your RX-20 will be in full view of your customer. An RX-20 that is dirty and unkempt in appearance can cause your image to suffer. You are offering your customer the latest in cleaning technology. Therefore, it is important that your company image reflects your desire to give your customer THE BEST.
4. Remove the in-line solution filter screen by unscrewing the  $\frac{7}{8}$  inch hex nut protruding from the back of the handle. Rinse under water to remove debris. If necessary, use a toothbrush to remove stubborn particles.

5. Check the jet spray for evenness. An uneven spray will cause improper flow of the cleaning solution.

6. Remove the cleaning head. It unscrews in the same direction it turns during operation (or clockwise). Once you have loosened the side). When looking at it from the under side, usually inspect your RX-20 for

- water leaks, damage to the cleaning heads, etc. Repair as necessary.
3. Visually inspect your RX-20 for

- breaks or tears. Repair or replace as necessary.
2. Inspect the vacuum hoses for

- breaks, etc. Repair as needed.
1. Inspect the power cord for cuts,

## Daily Maintenance

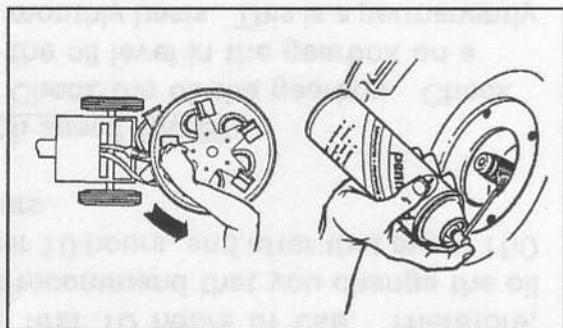

Lubrication and maintenance play a key role in the life of your RX-20. Hence, the following daily and periodic maintenance steps must be followed. Training yourself to maintain your unit on a regular schedule until it becomes habitual.

The surface finish on your RX-20 is a durable, baked on epoxy coating and is easily cleaned with a damp cloth. To further protect the finish, a light coat of good silicon base polish should be applied periodically.

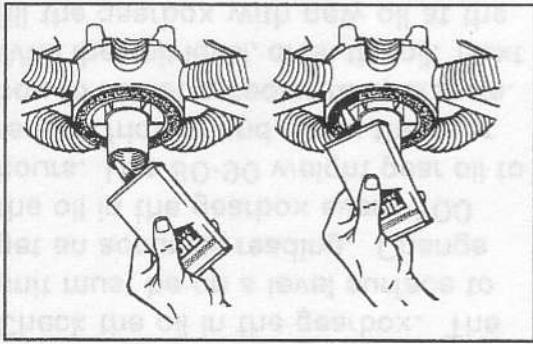

The surface finish on your RX-20 is a durable, baked on epoxy coating and is easily cleaned with a damp cloth. To further protect the finish, a light coat of good silicon base polish should be applied periodically.

# Machine Maintenance

**IMPORTANT:** While rotating the vacuum head assembly in the counter-clockwise position, make sure that it spins freely all the way down. If it begins to require the slightest finger tip pressure, unscrew it and brush off the threads. All it takes is the slightest grain of dirt or sand to obstruct the threads. If you turn too far onto a grain of dirt, the hub may become locked onto the shaft of the gearbox.

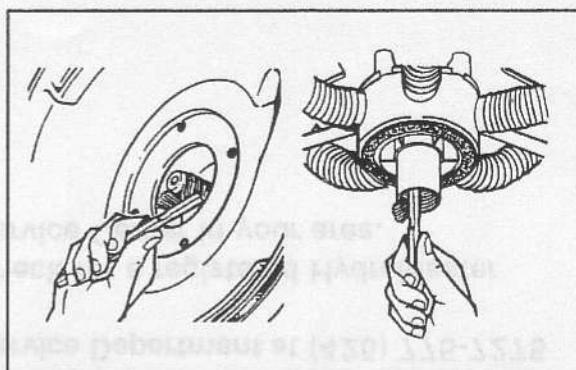

9. Coat the shaft with Pennz-Guard or a similar lubricant. Reinstall the vacuum head assembly onto the shaft by rotating it counter-clockwise.

30 weight SAE motor oil. Also, put a few drops into the hub threads.

8. Lubricate the felt vacuum seal on top of the hub with a quality,

out oil, severe damage may occur. If the gearbox is operated with gearbox. This will result in loss of oil in the seal, may damage the gearbox oil moved, may damage debris here, if not removed, accumulation of debris inside threaded bore of the hub. An inside accumulated on the gearbox shaft or the accumulation of debris that may have

#### ◆ CAUTION ◆

and prolong drying time). Lint buildup will restrict proper airflow through cleaning heads and vacuum hoses assembly. Clean any lint buildup from assembly not to wet the electric motor carefully not to wet the electric motor assembly with a garden hose, being careful not to wet the electric motor assembly. Wash the cleaning heads and shroud wrench just below the rotary union. To prevent the gearbox from turning, posed center nut.

Freeze Warning and Protection

Storied, it is recommended that the ceiling  
height sit flat on the floor and remain more  
stable, especially during transport.

### **Transport and/or Storage**

Your RX-20 can sustain damage from freezing, as can any equipment that functions with the use of water. Care must be taken to protect this tool from freezing just as you do your other equipment. To protect it from freezing, simply blow air from a gas station air hose through the solution quick connect with the valve open. This will blow all water from the valve, solution line, rotary union and jet assembly. Open and close the valve several times to ensure that all water is removed.

## Parts and Assemblies

Hydramaster has every part in stock. For parts ordering or servicing call: Parts Department at (425) 775-7276 or Service Department at (425) 775-7275 Check for a registered Hydramaster Service Center in Your area.

**Parts and Asssemblies**

Your RX-20 can sustain damage from freezing, as can any equipment that must be taken to protect this tool from freezing just as you do your other equipment. To protect it from freezing, simply blow air from a gas station air hose through the solution quick connect with the valve open. This will blow all water from the valve, solution line, rotary union and jet assembly. Open and close the valve several times to ensure that all water is removed.

#### **Periodic Maintenance**

Check the oil in the gearbox. The unit must be on a level surface to get an accurate reading. Change the oil in the gearbox every 100 hours. Use 80-90 weight gear oil to reduce friction and allow the gear box to run at a cooler temperature. With the unit level, drain the oil. Next fill the gearbox with new oil at the oil port on the front until it dribbles out of the inspection port.

**NOTE:** Normal wear and tear on your new gearbox will cause small amounts of metal splinters to rub loose during the first 10 hours of use. Therefore, we recommend that you change the oil after 10 hours, and after that every 100

**NOTE:** When checking the oil level in the gearbox, you can use a toothpick as a dip stick. The oil level should read

to, but not above, the middle of the gear. If oil needs to be added, use a quality 80-90 weight gear oil.

lubricated gearbox. You do not need to change the oil. However, main- taining the proper oil level is impor- tant. To check the oil level, remove the vent plug and look into the gear box. Turn the star until you can see the inspection hole in the gear. With the RX-20 sitting flat on a table or the floor, the oil level should be

If the valve has been frozen, inspect it for leakage before reinstalling the back plate.

### ♦ CAUTION ♦

6. The valve may now be rebuilt or re-built.
5. Remove the two bolts (E) holding the valve assembly in the handle and pull out.
4. Remove the bolt (D) holding the trigger assembly.
3. Disconnect the stainless steel hose (C) from the bottom of the valve.
2. Remove the five Allen head screws (B) in the back plate on the handle and lift the back plate off.
1. Remove the 440 male quick connect (A) with a wrench.

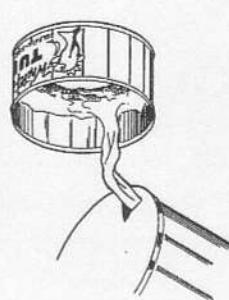

The valve assembly's moving parts will eventually wear out over time. Its repair or replacement is a relatively simple operation.

### High Pressure Valve Assembly:

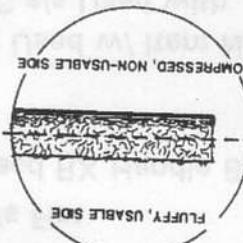

## Repair

can is the right size and shape and does not require a large amount of oil.) This seal is an important part in the optimum play and its condition can rejuvenate.

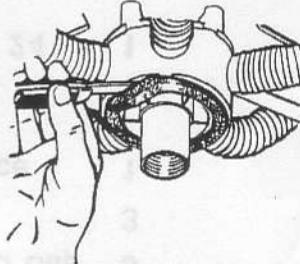

**NOTE:** A tuna fish always place the SAE motor oil, a quality 30 weight and saturate it with the seal in place soaked seal. Press flattened, used seal in an oil bath to

10 hours of use. Replace it with a spare, recommend changing the felt seal after damaged, replace it with a new one. We it over. If that does not work, or if it is so that it will not lubricate well, try turning out. If the seal appears worn or glazed knife, carefully pry the seal up and lift it as previously described. Using a pocket First, remove the vacuum head assembly as previously described.

A worn or unlubricated seal will not form a proper seal. Lack of a proper seal will impair the vacuuming capabilities of the unit and therefore leave behind more water in the carpet than is desirable.

No.	Problem/Possible Cause	Solution
1.0	Low Vacuum Flow at the Cleaning Heads	Replace felt seal with a lubricated one. Remove jets and clear them of debris. Restrict air flow.
1.1	Hub not sealing properly.	Replace felt seal with a lubricated one. Remove jets and clear them of debris. Restrict air flow.
1.2	Restrict air flow.	Replace felt seal with a lubricated one. Remove jets and clear them of debris. Restrict air flow.
1.3	Low vacuum flow from power	Refer to Troubleshooting section of equipment manual.
2.0	Low Water Flow at Cleaning Heads (indicated by irregular Water Temperature)	Remove jets and clear them of debris. Clogged water strainer. Restricted jets.
2.1	Restricted jets.	Remove jets and clear them of debris. Clogged water strainer. Restricted jets.
2.2	Clogged water strainer.	Remove water strainer and clean. Remove hose. Repair or replace.
2.3	Kinked or clogged solution hose.	Remove clogging hub from shaft. Clean and rethread onto shaft.
2.4	Cleaning hub not properly threaded to shaft.	Remove cleaning hub from shaft. Clean and rethread onto shaft.
3.0	Water Leak at Rotary Union	Dismantle rotary union. Clean.
3.1	Foreign matter in rotary union seal.	Dismantle rotary union seal.
4.0	Water Leak at Valve	Reassemble and install.
4.1	Ruptured plunger or valve o-ring.	Repair or replace damaged plunger, o-ring, seal. Check for freeze damage.

## Troubleshooting

No.	Problem/Possible Cause	Solution
5.0	Loss of Oil from Gearbox.	Replace damaged oil seal. Refill gearbox with oil.
6.0	No Power.	Have an electrician inspect unit for possible wiring or motor problems.
6.1	RX-20 wiring or power source.	Locate an unused power source.
6.2	Overload power source	Repair or replace gearbox.
6.3	Gearbox	Locate an unused power source.
7.0	Head wobbles during operation.	One leg of star bent. Straighten star.
7.1	One leg of star bent.	Straiten star.

(continued on the following page....)

Except as stated in this section and in the preceding section and except as to title, there are no guarantees or warranties of merchantability, fitness, or otherwise, implied or statutory, and HydralMaster shall have no liability for consequential, incidental or other damages howsoever caused.

This warranty covers parts, as specified, and does not cover labor which may be necessary in completing repairs. Hydramaster's liability to Purchaser, whether in contract or in tort arising out of warranties, representation, instructions, or defects from any cause shall be limited to repairing or replacing the defective part or parts. To qualify for warranty coverage, defective parts must be returned to Hydramaster within 30 days. No warranty liability whatsoever shall attach to Hydramaster unless and until Hydramaster has received payment in full for the warranted machine part.

HydrAlMaster agrees, at its option, to repair at the point of shipment, or to replace without charge, any parts or products of HydrAlMaster's manufacture which within the specified warranty period shall be proved to HydrAlMaster's satisfaction to have been defective when shipped, provided the purchaser notifies HydrAlMaster, in writing, of such alleged defect. HydrAlMaster will pay all freight and transportation charges within the United States, via normal ground shipping means, for replacement of parts covered under this warranty.

MachinerY, equipment, accessories furnished by Hydramaster, but manufactured by others, are warranted only to the extent of the original manufacturer's warranty to Hydramaster unless otherwise specified in the listing below.

HydraMaster's warranties Rotarty Extractor machines of its manufacture to be free from defects in material and workmanship if properly installed, maintained, and operated under normal conditions with competent supervision. No person, agent, representative or dealer is authorized to give any warranties on behalf of HydraMaster, nor to assume for HydraMaster any other liability in connection with any HydraMaster products. This warranty shall extend to the original purchaser of said equipment for the periods listed below from date of installation. If repairs or replacement parts are made by the Purchaser without HydraMaster's written consent, HydraMaster's warranty shall cease to be in effect.

## *Limited Warranty Plan*

11015 47th Avenue W. • Mukilteo, WA 98275

Frame, Handle, Body .....	3 years
Gearbox .....	1 year
Motor .....	1 year
Valves, Filters, Hoses .....	1 year

### Coverage Schedule

Records of periodic maintenance must be kept and copies may be required to be furnished to Hydramaster before this warranty is honored.

All recommended maintenance must be performed by competent service personnel.

Deposits and buildup in the water or chemical systems due to hardness in the water used or chemicals which results in deposits, will VOID all warranties on affected components.

Freezing of any water or chemical related component will VOID all warranties on water or chemical related components, internal or external, of this equipment.

All components not specifically referenced in the schedule below are covered under this warranty for a period of one (1) year, excepting those parts which are considered, by Hydramaster, to be expendable in normal use, including but not limited to paint, labels and other cosmetic parts or features.

Part No.	Description	Detailed Price
000-015-066	Bracket, RX-20 Hood Wrinkle Black	\$ 9.95
000-068-040	Bracket, Hi Speed RX Handle Brace	92.95
000-139-009	Base Out - Manifold	23.95
000-139-010	Ring, Snap Ring (E-Clip) x 1/2"	1.19
000-141-004	Axle, Hi Speed RX Wheel	0.49
000-141-005	Rod, Hi Speed RX-20 Handle Arc	13.95
000-141-006	Rod Assy, Hi Speed RX Handle Adjusting	17.95
000-020-004	Collar, 3/8" Set	28.95
000-041-013	Cover, Handle Access	1.49
000-052-050	Quick Connect, 440 Male with Viton	6.95
000-052-071	Nipple, 1/4 Brass Hex	0.89
000-061-001	Handle, Hi Speed RX-20	2.95
000-068-175	Label, RX-20 Machine (3 pc set)	17.95
000-074-010	House, Solution Valve to Rotary Union	37.95
