Questions and Answers:

Q. Why do customers pick this Ninja body style over the carpet cleaning body styles?

A. This machine is one of the lightest weighted machines that is 200 psi, dual 2 stage vacuum, with a heater installed. While the majority of the weight of a carpet cleaning

Equipment: Carpet Cleaning Machines > Vacuum Cleaners > HEPA Concrete Dust Slurry Hazmat Vacuums >

machine is made up of the internal guts that are installed under the hood. The total internal componets weight is always the same among all brands and body styles. The difference is in the body of the plastic. This design is lighter weight with smaller wheels and casters. This is currently the oldest body stile in production today. This body was released to the carpet cleaning market in the mid 1980's, while the 2nd oldest body stile that is still on the market today is the Mytee 1003DX released around 1993. This makes the Ninja Classic almost a proven track record a full decade ahead of 2nd place. People historically purchased this body style for ease of lifting in and out of the service vehicle or for stair case travel. Also wired to run on dual 15 amp breakers. Wired so the cleaning machine is 15 amps and then the heater is 15 amps on the 2nd cord.
