Manufacturer: Husqvarna Equipment

Husqvarna 970519505 DE130H Hepa Vacuum 240V 20Amps 224Cfm 106Lbs

Product Description

DE 130 H is a high-productive single-phase H/HEPA dust extractor designed for demanding applications such as floor preparation, grinding, shaving, scarifying, shot blasting, and together with larger handheld tools. The Auto-Pulse technology by Husqvarna ensures a steady high airflow with virtually no decrease in capacity throughout the entire work cycle. With e-flow technology, airspeed is automatically adjusted and optimised, saving up to 30%* more energy. This sturdy dust extractor is also easy to transport due to its compact size. Its high standard of water resistance (IP 55) allows for fast and efficient decontamination. Furthermore, embedded connectivity features enable quick access to location, service, filter status, and other valuable usage data.

* Based on inhouse tests conducted in laboratory environment for models DE 110 and DE 120, measuring current at nominal voltage with e-flow activated, without any restrictions in the system. Power is calculated from the current/voltage and compared with the power consumption at full flow, also without restrictions.
