

Model Number: 860135

Nikro 860135, Reverse Air Blast, 25 ft Hose Assembly

Manufacturer: Nikro

Reverse Air Blast Assembly

Product Description

Air blasts back towards the operator. Lightweight hose and nozzle allows the hose to propel itself through the duct away from the operator. (#860137 Reverse Replacement Nozzle)

This product hooks up to your air compressor (3/8" air line). Can be used to clean dryer vents and air ducts.

Product Specifications

Air blasts back towards the operator. Lightweight hose (25' long) and nozzle allows the hose to propel itself through the duct away from the operator.

Question: Can the head be removed to switch out to a forward blast nozzle?

Answer: the head can be unscrewed and the size is a 1/8" NPT. I wouldn't recommend putting a forward nozzle on that hose because there is no rigidity to it. This is meant for a reverse nozzle and when the is passing through it, the whole hose shoots down the duct work. If you put a forward nozzle it might shoot back at the operator or just coil up in the ductwork.

Recommended with use on 12 cfm air compressors on ducting under 12" in diameter.
