Because of Ebac's unique "Hot Gas" defrosting feature, the Ebac CD100 will function smoothly in temperatures down to 33F degrees without frost build up. Designed to survive under adverse conditions and to deliver the goods. This unit will efficiently remove more than ninety seven pints of airborne water vapor per day under standard conditions (80 F, 60%RH), and will exceed 21 gallons per day under the extreme conditions found in problem environments.

The Ebac CD100 is a versatile workhorse designed to eliminate high humidity problems in harsh environments. Warehouses, storerooms, electrical & communications switching stations, locker rooms, basements, pumping stations, offshore oil rigs and active and laid up marine vessels have all found this rugged unit to be equal to the task. The impressive CD100 can be easily moved from site to site or can be permanently mounted and ducted to suit a variety of applications.

As a reminder, customers MUST be present to sign for shipments. Ebac is not liable for any damages or warranty claims that are brought to our attention after a customer has left a note telling the carrier that it is OK TO LEAVE a shipment at the customer's residence or delivery address without them being present. All shipments should be carefully inspected before accepting delivery to ensure item is delivered free of damage.
