ProRestore Electro-Gen Electric Thermal Fogger 220 Volt Unsmoke ElectroGen 101267001

Manufacturer: Drieaz

ProRestore Electro-Gen®;

The industry's most durable electric thermal fogger.

A versatile odor control application tool, the Electro-Gen produces a true "dry fog" with a particle size similar to that found in smoke — allowing for deep, thorough penetration and virtually eliminating the drips and streaks associated with conventional mister and foggers.

The 220 Volt units come with a 110 plug on them which will need to be switched once you receive it. Since the factory does not know what country the user will be in, they have no way of anticipating which plug they will need. The plug is something that you can purchase at a hardware or electrical supply store in your country.

For complete instructions and safety data for this product, refer to the User Guide, available under the Documents tab.

Remove the barrel and the Electro-Gen also can be used as an electric sprayer to apply solvent or water-based chemicals for deodorizing, disinfecting, flame proofing, pest control, fabric protecting, and more.
