

Model Number: KT20

ZipWall KT20 Kit 20

Manufacturer: ZipWall Barrier Products

The KT20 Pack Includes:

- 2 - 20 foot extension poles
- 2 - spring-loaded jacks
- 2 - grip disks
- 2 - tethers

The Kit 20 package is ideal for any job with a ceiling height from 6 feet 9 inches to 21 feet. Just try putting up a 20 foot high barrier using a step ladder, it's impossible. But with the ZipWall® Kit 20 poles, you can have a tight barrier up in just minutes without your feet ever leaving the ground.

The ZipWall® Kit 20 is used in commercial sites such as malls, building foyers, stairwells, and any place with a ceiling height up to 21 feet. Many residential contractors have several pairs for those jobs with vaulted ceilings, grand staircases, and foyers. If you need to put up a barrier in these situations the Kit 20 is the only way to go. See how it works, watch the short video demos listed on this page.

The Kit 20 poles extend from 6' 9" to 20 feet. The spring loaded plunger called the jack screws onto the end of the pole and adds a foot of reach. This product can actually be used in areas with a ceiling height up to 21 feet.

The poles can be placed 8 to 10 feet apart. If there is any significant air movement that pushes the plastic you will need to pull them in closer together, anywhere from 4 to 8 feet.

If the poles are placed closely together you may need two or more people to attach them to the plastic and raise them into place.

The GripDisk® slide stoppers should always be used especially on hard surfaces. Two GripDisk® slide stoppers come in every Kit 20 package.

Plastic sheeting is not included,
