

Model Number: 000-163-034

HydraMaster 000-163-034 Evolution 12in Carpet Cleaning Wand 2 jet model CSW-13-500 AW97
Freight Included

Manufacturer: US Products

All HYDRAMASTER ORDERS ARE FINAL, NON-CANCELLABLE, NO REFUNDS,
PRICES SUBJECT TO CHANGE BASED ON DATE SHIPPED!

HydraMaster US Products Evolution 12in Carpet Cleaning Wand 2 jet model
CSW-13-500 AW97 000-163-034 (discount shipping)

EVOLUTION TM

Superior Carpet Wand Performance for Truckmounts

When designing a new product, we look at how our product can help our customers perform better and be more efficient. The Evolution carpet wand's innovative design helped to increase the performance of our portable carpet extractors, so the next logical step was to create the Evolution TM designed specifically for use with truckmounts.

Customer input has always been important to us in the design phase of a product. We let several professional carpet cleaners and testing facilities use this new carpet wand for many hours so we could gain valuable insight in the final design of this new carpet wand.

The Evolution TM was designed using the same laminar airflow design as the original, only in a bigger model of wand made specifically to work with truckmount cleaning systems.

Using a 1-1/2" vacuum tube, this wand connects directly to the 1-1/2" vacuum hose of most truckmounts with no need for reducing couplers that limit performance. A wide 12" head helps to increase productivity by covering more square feet per hour. At only 8.8 lbs, the Evolution TM helps to reduce fatigue on the cleaning technician.

The custom glide holder is rotationally molded into the head for an airtight fit of the custom glide that provides smooth operation on nearly any type of carpeted surface. Most importantly, the laminar air flow design delivers superior water recovery by streamlining airflow and 4 spray jets provide optimum coverage and cleaning power.

U.S. Products takes carpet wand design to the next level with the Evolution. The Evolution carpet wand is light, durable, and more efficient than any other wand on the market today! Through scientific testing, the Evolution was designed to smooth airflow and boost water recovery performance. The rotationally molded head and aircraft aluminum tube combine to make a carpet wand that is about half the weight of most stainless steel carpet wands. Replaceable air tight Delrin®; acetal glide and ergonomic design allow effortless glide across any type of carpet.

PLEASE NOTE: ALL THE PHOTOS ON THE WEBPAGE ARE OF THE 16" MODEL AND NOT THE ONE OF THE ITEM YOU WOULD RECEIVE. The 12" model has only two jets on it with 1-1/2" OD Pipe

.Wandering About Wands?

What Facility Managers and Cleaning Professionals Should Know about Carpet Extraction Wands

When selecting a new carpet extractor, many cleaning professionals and facility managers investigate the extractor, but spend surprisingly little time analyzing the unit's wand. This is a serious mistake because the wand plays a crucial role in the carpet cleaning process.

The key reason wands get scant attention is because for many years they were all similar. Manufacturers believed improved cleaning performance came from the extractor, and not the wand.

However, as equipment manufacturers look for new ways to improve machines' efficiency and effectiveness, the wand has gotten considerably

more attention. Some wands today are made from new materials with more advanced engineering and ergonomic features. Take the time to look at the Evolution Wands from US Products Pro.

Wand History

Some of the first carpet extractor wands were introduced in the 1960s. Most operated with about the same technology, allowing the wand to spray water and solution on the carpet and then extract water and/or solution as it was pulled back, removing soiling in the process.

Most of these wands were made of a heavy metal material, making them difficult and often physically stressful to use. Today, Evolution Wands from US Products pro are far lighter, more ergonomic, and essentially glide over the carpet. Therefore, the wand works with the user and is less taxing on the body.

Selecting an ergonomically designed wand starts with testing the different wands available. It should be light and responsive. Instead of metal, more advanced wands like the Evolution are now made of rotational molded plastic. These wands tend to be exceptionally light, but their lightweight can be deceiving because they are also quite durable.

Further, the Evolution wands have built-in, custom fit glide holders with slotted holes. Not only are these types of wands easier to use, testing shows they leave the carpet dryer and are less likely to leave residues which can contribute to re-soiling.

Jets

After testing different wands and selecting a system, managers and cleaning professionals still must evaluate the tool's performance. Considerations that can impact the wand's performance are the number of jets and the distance of the jets from the carpet's surface.

With a single jet wand, the jet may be too close to the carpet and the spray will provide limited coverage. In fact, the spray may not even spread from one edge of the wand to the other. This creates more work for the carpet cleaning technician. The technician must make sure there is enough overlap so the spray reaches all areas of the carpet, usually requiring multiple strokes.

With a multi-jet wand, the spray from each individual jet must spread enough to intersect with the spray from adjoining jets. If the spray from each jet does not properly intersect or is uneven, areas of the carpet may remain soiled. Ensure the pressure from the extractor is high enough for sufficient spray spread to the wand to rectify this issue.

Airflow Issues

A final and very important issue is airflow and how it travels through the wand. Engineers now realize the airflow traveling through the wand can influence the overall effectiveness of the extractor.

On most wands made today, the airflow is what scientists would call "turbulent." It bounces off the insides of the wand's tubing, slowing airflow through the wand and limiting carpet cleaning performance. This puts

greater burden on the extractor to compensate for this turbulent airflow.

However, with the Evolution Wand Series from US Products Pro this has been corrected through the use of "laminar technology." Laminar technology allows airflow to flow more smoothly through the wand. This allows the extractor's vacuum system to operate at optimal performance, more efficiently removing moisture and soils from the carpet.

The development of laminar technology has resulted in some engineering surprises. For instance, one carpet extractor manufacturer received a higher, more coveted rating from the Carpet and Rug Institute's Seal of Approval Program just by adding a laminar wand to its system.

Hopefully, managers and cleaning professionals now realize wands cannot be overlooked. Instead, wands should be viewed as a crucial component in proper carpet extraction. Today's lighter, ergonomic wands that incorporate advanced airflow technologies can help users achieve superior carpet cleaning results - faster cleaning, better appearance, and reduced downtimes due to faster drying.

NOTICE!

HydraMaster continues to operate with the following policies in place: All purchase orders received by HydraMaster are considered FINAL AND NON CANCELLABLE. Pricing listed on the website are based on the order entry date. Actual invoice pricing may be different at the time of shipment. All prices are subject to change. HydraMaster reserves the right to implement special surcharges due to rapidly changing business conditions. Actual pricing at the time of shipping subject to change!
