Injectidry Water Separator AC8307

Injectidry Water Separator

The Water Separator works to protect your HP 60 blower by preventing bulk water from passing through it when drying in a negative mode. It should be used after the initial vacuuming with a truck mount system to capture the remaining water that could be undetected. Placing it as we recommend, it will collect bulk water that may be trapped in ceilings, walls, floors, or cabinets that you are drying. It is no ordinary bucket... The Separator has an anti-collapse ring built into it.
