

Model Number: MI24

Injectidry HP60 Blower MI24 Base only

Manufacturer: Injectidry System

Injectidry HP60 Blower MI24 Base only

- Includes main air in and main air out hoses
- Both a positive and negative blower
- Dries over 100 feet of wall cavities
- Compatible with Vac-It Panels for floor drying

Replacement HP60 base unit with air out and air in main hoses only.

The Injectidry HP60 drying system is the only truly industrial grade system sold today. The internal blower is a Regenerative Blower and many operate 20,000 hours or more trouble free. This translates into more than 10 years of continuous operation. It is not a fan that is typically associated with a portable carpet cleaning machine or shop-vac.

Features and Benefits:

- Use with either positive or negative air flow
- Over 100 CFM
- 60 inches of water lift
- 8 decibels quieter than competing models, and when using the silencer, the HP60i is even more quiet

You can even dry wall cavities with mold when using the machine with negative pressure and the available Interceptor In-line HEPA filtering system (sold separately).
