Super smooth interior surface

In environments where large amounts of dust are produced, dust extractors often need a pre-separator to prevent from clogging and overworking your extractor machines. The Ermator C3000 Pre-Separator will effectively supplement the work of your dust extractor and capture as much dust as possible before it reaches the main extractor. This will increase the efficiency of dust separation from the air stream, and improve the filter performance of your larger extractor. Attach the additional 2″ Hose Assembly for extended reach and additional functions on the Ermator C3000.
