Pros Choice 2030 Molecular Modifier Enzyme O2000 Deodorizer 1 Gallon UPC 078345003000

Description

Molecular Modifier is a formulation of cleaning agents, bacterial cultures, enzymes, and odor modifiers which break down the molecular structures of odor causing substances and stains. Removes most odors and stains caused by urine, vomit, feces, blood, mildew, decaying food, and other organic matter.

Directions

Agitate, or stir before use. Saturate contaminated area with sufficient Molecular Modifier to penetrate all contamination which might have soaked into carpet, backing, and pad. An injection needle can be helpful to reach sub-surface contamination.

Allow treated area to dry completely. maximum effects of treatment may not be realized for up to 14 days. After sufficient dwell time, hot water extraction cleaning is strongly recommended as residual product may attract soil.

However, we understand that in many cases the professional cleaner may not have the option to come back after several days but need to complete the treatment and the clean in one visit. In cases like this treat the carpet full strength and try to give the carpet at least one hour dwell time. Clean the carpet normally around the treated area but be less aggressive on the treated area. This will leave an enzyme content in the carpet backing and pad to continue working. Regardless of which enzyme product you use be sure to keep pets away from the area being treated until the carpet is clean and dry.
