

Model Number: MB120LPC-D

HydroForce MB120LPC-D Demo E-TES Low Profile Carpet Flood Restoration Drying System - Bed Bug Heater

Manufacturer: HydroForce

HydroForce MB120LPC-D: Demo E-TES Low Profile Carpet Flood Restoration Drying System - Bed Bug Heater

#### Description

Directed Heat Drying is a precise science-based method of heating water. Every 18 degree temperature increase in water doubles its vapor pressure and dramatically increases evaporation. E-TES Smart Dry (SD) is the perfect tool to raise water temperature, increasing evaporation. E-TES is effective on jobs that target specific problem areas, and it can be used as a compliment to conventional drying.

#### Features

- Smaller profile allows the E-TES to fit into tight areas, such as crawl spaces
- Light weight, only 30 lbs.
- Built-in ergonomic handles make it easier to carry multiple E-TES units
- Stackable
- Straight through airflow, more airflow and less internal turbulence
- Micro-processor
- LCD display
- Built-in hour meter
- Real time clock
- Humidity and temperature sensor
- NEC&reg; compliant
- Dual circuit indicator (120 volt)
- GFCI protection
- Airflow and triple heat safety shut off
- 50' GFCI cord

Bed Bug Treatment

It is important to note that when you use a heated drying system, you will need to make sure that the outside air is under 50% RH and you will have to also exhaust air outside the building during the service using a ventilation fan like the one below. Bed bugs ex- posed to 113&deg;F will die if they receive constant exposure to that temperature for 90 minutes or more. However, they will die within 20 minutes if exposed to 118&deg;F. Interestingly, bed bug eggs must be exposed to 118&deg;F for 90 minutes to reach 100% mortality.

Optional

Shazaam: DriStorm Blast Axial Air Mover 1 HP

Equipment: Carpet Cleaning Machines > Vacuum Cleaners > HEPA Concrete Dust Slurry Hazmat Vacuums >

20190904JMG
