

Model Number: 581921802

Husqvarna 581921802, Hiperhard Densifier, 1 Gal, with Potassium Silicate, 581 92 18-02, GTIN 805544826389

Manufacturer: Husqvarna Equipment

Husqvarna Hiperhard Densifier 1 Gal with Potassium Silicate

## Hiperhard

Hiperhard is our most popular and commonly used densifier. Hiperhard contains potassium silicate. It is optimal for porous floors thanks to its ability to better and faster fill out larger voids and pores. This also makes it optimal for the first application on any new project, where surface is still a bit rough and absorption therefore is high.

- Hyperhard Floor Hardening System Is Applied To The Concrete Surface To React With The Calcium Hydroxide (Free Lime) To Produce Calcium Silicate, Which Has A Crystalline/Glassy Structure. This Increases The Surface Tension Of The Concrete Allowing It To Be Polished Economically.
- Approximate Coverage Is 300 SQ.FT. Per Gal.
