

Model Number: 20240516

5th Wheel Camper Power Converter From Dual 120V Joiner Step Up Converts Dual 20amp 120V To NEMA 14-50 240V 4wire 20240516

Manufacturer: Clean Storm

5th Wheel Power Converter From Dual 120 volts Joiner Step Up Converts Dual 20amp 120V To NEMA 14-50 240V 4wire 20240516

Perfect for RV's, campers, electric cars, pressure washers, welders, plasma cutters, vapor steam cleaners, and other high powered equipment when 230-240 volt plugs are just not available. Can be used up to 4,800 watts. This is enough power to run two 5th wheel RV roof mount ACs, plus refrigerator / freeze and RV battery charger.

Not for use on GFCI or LDCI 115/120 volt Outlets.

To use simply plug into different outlets and push the momentary button to test voltage. If the voltage read between 220 to 240 volts you are good to go. Not all outlet combinations will produce the correct voltage so you have to test before each use and different locations. If you push the voltage test button and the green light does not light up bright green, simply re-located one of the power cords to a different location and retest. Every job site location has the ability to provide plus or minus 230/240 volts. If you use 15 amp 115/120 volt circuits then you will only be able to operate 15 amp 230/240 volt equipment.

Until both 120 volt power cords are connected to a 120 volt electrical source, it is electrically isolated from the electrical circuit of the male plug on the 2nd power cord. This protects the user from accidental shock through the exposed male plug contact.

Also manufactured in other outlet 220 to 240 volt receptacles available including but not limited to: NEMA 6-30R, NEMA 6-50R, NEMA 10-30R, 14-30R, 14-50R, L6-20R, 6-20R, L6-30R, L14-30R, and Many more

This webpage units will be made with 14-50R Flush like the photo below.

Plastic Box is 6" X 6" X 4"

Dual 12-3 X 25 ft power cords with triple 20 amp push breakers.

Green Light Voltage Notification/Confirmation that the cords are plugged in correctly.

Rubber feet on bottom of box.

You must test both wall outlets with a receptacle polarity tester before use!

20100823 Electrical Outlet Receptacle Tester 3 wire 120 volt

Note: User assumes all responsibility on use. It is the users responsibility to check the inbound voltage, outbound voltage, and total amp draw to verify these are not going to be overloaded. The user agrees to test the amp draw of any appliance or machine that they plug into these converters to ensure they are not being overloaded.

Meters are cheap and mistakes are expensive. You can purchase a meter at

<https://www.steam-brite.com/voltage-meter-multitester-p-6259.html>

User agrees to hold Steam Brite, its employees, and agents harmless in the event of any use of said use of converter. The user agrees to not hold SteamBrite and all employee against any problems that arise out of the use of said converters/ inverters. Remember, just because it plugs in does not mean it is OK to use!

Please remember the 80/20 electrical rule. If you are going to plug into a 15 amp outlet and draw long term the device needs to be under 80% of 15 amps = 12 amps max.

If I plug into dual 20 amp breakers long term then the 80/20 rules math is 20 amps X 80% = Set to 16 amps max draw @ 240 volts.

Made in the USA.

Manufacture 1 Yr warranty. Add optional 2 or 4 more years for a little more.

Tips: One customer wrote, "I plugged into different walls, not the same outlet, and it did not work."

Answer: This is incorrect step / understanding.  
In order to have the power supply box work, it must be plugged into different phases.  
There are two phases of power in every home.

Half of all the outlets are on left phase, and the other half is on right phase.

You must land on one of each phase in order for the power supply to work.

This means if I just randomly select two outlets in a home, I could be plugged into: two left side phases, 2 right side phases, or 1 of left + 1 right (correct use of power supply, depress phase locator button on the power supply box and will illuminate bright green on the phase locator light if you plugged in correctly.)

If you look at the breaker panel (photo to the right) and notice the column of breakers on the left side and then a column on the right side.

The way a breaker box is wired is the top left breaker is left phase, the 2nd from the top left straight down the left column is right phase, 3rd down is left column is left phase, 4th down is right phase. These breakers alternate phase location all the way down each column.

The top right column of breakers works exactly the same way. You have to land on one left phase and one right phase to make this item work. It is OK to have landed on a pair of outlets that is left and right side and each is positioned anywhere in the breaker panel.

Since this power supply box will not work with GFCI or LCI outlets you can also replace a GFCI outlet with a standard wall receptacle.

Optionally, if the two breakers you want to use are on the same phase, simply change the location of one of the two breakers to be in a different position in the column. This is very easy to do and only takes a screw driver (see video link below.)

Go outside and turn off the breaker and turn off the breaker that is labeled as "main." Go back to the garage and take off the garage panel cover.

Grab the breaker you want to relocate and simply switch positions with another breaker either one up or one down in the column. You can change the location of the breaker or change the location of the wire in the breaker (your choice.) This will put the breaker on a different phase. Again, see video below on how to do this.

<https://youtu.be/BG9I-PokSdl?si=m06267ZWR54Tiknu>  
and

<https://youtu.be/lzTV9t7bnH8?si=p1lgRxxO5gsEvmub>

Once you are on different phases, and press the momentary phase location button on your power supply box, the green light will be bright green telling you, you selected one left and one right phase and you are good to use this power supply box below the required amp draw of the wall outlets you plugged into.

Some of our customer use this same box as a travel box to charge their electric car.

What comes with most electric cars is a factory provided 120 volts 16 amps or 1920 watt charging cord.

A level 2 charging speed is 240 volts 16 amps or 3840 watt charging cord. This is 100% faster than the default factory included cord.

Fast speed and adjustable chargers are 240 volts up to 32 amps or 7680 watts. This is 100% faster than the 3840 watt charging cord and 400% faster than the factory provided cord, again please turn down to 16 amps @ 240 volts to use the travel box.

Why are electric car charging cables adjustable?

Set to 16 amps @ 240 volts, 24 amps @ 240 volts, or 32 amp @ 240 volt. The more time you have to charge your car, it's best set to the lowest setting!

Example: if I have the entire night and can leave the car on charge for 6 hours, set to 16 amps. If traveling and using the optional Reverse14-50R box below, set to 16 amps. If stopping at home for lunch and only have an hour before I leave again, set to 32 amps. If I only have about 4 hours to charge my car, set to 24 amps.

1. 32 Amp @ 240 volt is super fast charging when you need fast charging.
2. The longer and slower you take to charge your batteries, the longer the batteries will last in both years as well as per charge. (Changing all the car batteries is expensive and this charger will maximize their lifespan!) Your batteries will last longer in both years before they will no longer hold a charge as well as each charge is more complete (each individual charge last longer.)
3. Take with you on the go. See below. Set to 16 amp and use this optional converter box.

Testimonial:

"Thank you for making available your Power Joiner Step Up Inverter Level 2 EV Charger. I am now able to connect this device to two 120-volt outlets and provide a Level 2 charge to my EV anywhere I go, even remote locations where Level 2 is unavailable. Your easy-to-use product really makes finding a Level 2 charge for my EV a worry-free process! Thanks again for this great product!

Regards, Jim" Inv 103331 Scottsdale AZ 85259

"I primarily purchased the converter box solely for charging my Tesla vehicle when I find myself visiting friends or family whom do not have a 220v outlet I can use. The converter purchased from your website has been extremely convenient, I simply keep it in my trunk, so I always have it when I need it. The cords are extremely long, and the charge time is significantly shorter than a regular 110v outlet; I would definitely recommend this product to others.

Thanks."

Jared, Moreno Valley, CA 92555

"I use this to power my portable EVSE. (With a 32 amp adjustable EV Car charging cable)

Equipment: Carpet Cleaning Machines > Vacuum Cleaners > HEPA Concrete Dust Slurry Hazmat Vacuums >

I recently got a (electric Genesis) GV60 and picked up the power joiner to hold me over until the electrician could install a 14-50r. Now I keep it in the car in case I need to charge while at my girlfriends or visiting friends or family. Product works great once you find a matching pair of sockets. I've used it on 15 and 20 amp circuits and have had no issues."  
Regards, Lawrence
