AR JK-SS1515N Pump

Description

An industrial pump is a mechanical apparatus that transports fluid by converting mechanical energy from its motor to hydraulic energy. The machine is able to transmit fluid from one location to another because of this energy transfer. An inlet tube, a motor and impeller, and an outlet comprise an industrial pump.

Stainless steel will hold up to many chemicals that attack brass, aluminum, and nickel. Seals in all stainless pumps are Viton. Holds up to salt water. Great for R/O systems and deionized water.

Since 1958 Annovi Reverberi has been the world's leading manufacturer of diaphragm pumps for agriculture and plunger pumps for industrial washing. Today, Annovi Reverberi has a major presence in the cleaning sector thanks to its high pressure cleaners, for both private and professional use, representing pioneering solutions in the global market.

We blend high quality standards and Italian know-how in all our products to meet our customers' needs.
